Release Summary
Sluglet

[**Github - Known Issues**](#)

User Story	Status	Acceptance Criteria
As a user, I want to search through all available UCSC classes for the current quarter so that I can find classes and add them to my personal schedule.	Launched ˅	When the user navigates to the search screen, they should be able to scroll through a list of available courses, filter courses via the search bar, and add courses to their account by clicking the add button
As a user, I want to see a calendar with all of my classes scheduled so I can visualize when my classes are.	Launched ˅	When the user navigates to the calendar page, they should see a calendar with dots indicating days that they have classes. Below the calendar, they should see a list with their personal courses for that day. When selecting a different day, they should see a new set of courses that occur on that day.
As a user, I want to see all the classes I selected appear on the map so that I can easily find individual classrooms.	Launched ˅	When the user navigates to the map screen, they should see all of their personal courses appear as a red marker on the map. When they click on a marker they should be able to see which class that marker corresponds to.
As a user, I want to see my location on the map so I know where I am on campus.	Launched ˅	When the user navigates to the map screen for the first time, they should be prompted to accept location permissions. If they refuse, they should not see the map and be presented with the option to launch their settings instead. If they accept, they should see a map with a blue icon representing their current location. They should be able to click an icon that animates to their location as well.
As a user, I want to see a route from my current location so I can know how to get somewhere easily.	Launched ˅	When a user has accepted location permissions they should have access to a map with their current location and markers for any classes they have selected. From here, they should be able to click on a course marker and select

Sluglet

User Story	Status	Acceptance Criteria
		navigate to show a walking path route to that marker from their current location.
As a user, I want to be notified when it's time for class so I don't forget.	Launched ▾	When the user selects classes, an alarm should be set according to when those classes are so that they receive a notification in advance.
As a user, I want to use the app before signing in so I can start scheduling immediately and have a chance to experience the app before deciding whether I want to make an account. If I do make an account, I want whatever I did anonymously to transfer so that I do not have to redo selecting classes.	Launched ▾	Every user that opens the app should be assigned an anonymous account so that they can behave as a regular user without needing to sign up. Once they navigate to the sign up screen and create an account, their data should be linked so that they don't have to redo any work they had done while anonymous.
As a user, I want to easily remove courses from my app schedule so I can adapt to changes in my UCSC schedule	Launched ▾	When a user clicks a "delete" icon on a class on their homepage, this course should be removed from their account.
